

The future of GIS technology

NATO CORE GIS, GIS and its relation to C2 and FASs, a common geospatial framework for NATO

Esri is the world leader in Geographic Information Systems (GIS) technology. Mr Jack Dangermond is the founder and President of Esri and for 40 years has been seen as a visionary across the GIS Community. Jack Dangermond will talk to NCI Agency staff about his vision for GIS in the defence sector. The briefing will take place in the NCI Agency main conference room from 1100-1230hrs on Monday the 21st of January.

NCI Agency and ACT will present where we are with the NATO CORE GIS and its plans for the future. Jack will tell us about his GIS vision which will lead to a live demonstration of how Core GIS can be utilised by commanders and staff to support NATO's latest concepts, including deployable JFC's. It will also show how C2 and FAS's can use Core GIS to geospatially enable, as examples, planning, the intelligence process and the logistics function. The presentation will therefore take us well beyond the concept of "Fighting off the Same Map" and into a possible future scenario of a common geospatial framework for NATO.

All staff, but especially PM and senior technical staff are encouraged to attend the first briefing followed by a more technical session in the afternoon.

Should you have any questions on the above briefings please contact John Teufert at Room 272.

1. Jack Dangermond briefing on the Vision of GIS

NCI Agency main conference room 1100-1230hrs, Monday 21st of January.

2. ESRI technical demo and discussions

NCI Agency main conference room 1330-1430hrs, Monday 21st of January.
