

Announcement of pending BOA Competition
NATO Public-Key Infrastructure Capability (NPKI)

RFQ-CO-115518-NPKI

Estimated Value: 756,000 EUR

IFB Estimated Release Date: February 2022

Estimate Bid Closing Date: March 2022

The NCI Agency is seeking the acquisition of the professional services for the implementation of the NATO Public Key Infrastructure (NPKI) at two computer hall locations; and the procurement of Red Hat software licenses.

The Prospective Bidder List is attached. Interested companies **already holding an active BOA** with the NCI Agency may contact the below POC for inclusion in the Offeror List.

Principal Contracting Officer: Mr Edel Esparza

Point of Contact: Mr Frank Iyakaremye

E-mail: RFQ-CO-115518-NPKI-M@ncia.nato.int

Annexes:

1. Summary of Requirements
2. Prospective Bidder List

Annex A – Summary of Requirements

1. Introduction

The NCI Agency has a requirement to deliver a capability that will enhance NATO's current PKI system in order to deliver a more resilient capability to support further growth in demand on PKI services across the Enterprise.

The purpose of this Basic Ordering Agreement (BOA) relates to the design and installation of the underlying infrastructure, to be built in two of the organisation's computer halls, that will provide a platform to host the new PKI Services, which will enhance the security of NATO systems. Additionally, whilst no hardware procurement is in scope of this BOA, the Agency requires the procurement of Redhat Software licenses.

2. Project Scope

Interested and eligible companies will be anticipated to provide a quotation for the following requirements:

- a. The NATO Communications and Information Agency has a requirement to deliver a high availability resilient system to support future NATO Enterprise systems and networks.
- b. The successful supplier of this BOA competition will be expected to work on site in multiple locations in Belgium, on Purchaser premises, working closely with the Purchaser Project team and build a capability that integrates into the hosting organisation's computer halls.
- c. Whilst no hardware procurement component forms part of this BOA, the supplier is expected to design and build the underlying infrastructure onto which a third party application will be deployed. The hardware to be used in the installation will be provided by the Agency.
- d. The system itself will require multiple disciplines of expertise in order to ensure successful delivery.
- e. The Supplier will be expected to work with the Purchaser and multiple other vendors to successfully install and configure the system into two computer halls, complying with all local environmental conditions within those locations.
- f. The system itself will be formed of multiple environments, reference and production, with defined standards of security and availability.
- g. The Supplier will be required to carry out the physical installations, switches, firewalls, VPNs, load balancers, configuration of virtual systems, and installation of replicated database systems as part of the contracted work.

3. Geographical Implementation

- a. The Supplier will be expected to deploy teams to the Purchaser locations at multiple computer halls in Belgium – primarily Brussels and Mons.
